Hyderabad, Telangana. 500090 | bandari.ajaykumar2001@gmail.com | +91 8919275981

SUMMARY

- With over 1.5 years dedicated to Web Application Development, I possess a fervent commitment to resolving intricate challenges and advancing company objectives.
- Proficiency spans across frontend and backend technologies, with a specialization in the MERN stack. Demonstrated prowess includes adeptness in integrating/developing REST APIs, crafting React components employing hooks, configuring Node.js servers via Azure, Express, and seamlessly integrating SQL, CosmosDB, MongoDB.
- My skill set encompasses comprehensive software application development, encompassing requirement analysis, system design, debugging, documentation, and implementation phases. Additionally, I exhibit robust abilities in algorithmic problem-solving and effective debugging techniques.

EXPERIENCE

Ahex Technologies Pvt. Ltd.
Software Engineer (Back-end)

May 2023 - Present

SKILLS

Programming Languages: TypeScript, JavaScript, Python

Front-End: HTML, CSS, React JS, Next JS, React-Redux

Back-End: Node JS, Express JS

Database: SQL, MongoDB, CosmosDB

Cloud Services: Azure

Version Control Tool: GIT (Github)

CI/CD: Setting up pipelines on Linux servers, Nginx configuration, GitHub Actions

Other Services: Azure Communication services, Auth0.

EDUCATION

Government city college(B), Hyderabad, Telangana,
Degree(MECS)

EXTRA CURRICULAR

- Actively participated in various community service initiatives and projects as an **NSS volunteer** during my college years.

PROJECTS

Thapala (Mailing Platform)

Developed a comprehensive mailing and emailing platform utilizing Node.js and TypeScript. The platform supports a range of features including notes, daily planners, event scheduling, email encryption, folder and file management, and trash and restore functionalities. Designed and implemented a complex database schema using SQL and Sequelize to ensure high performance and security. Configured Linux servers and Nginx to host the application, ensuring reliable and secure access. Automated deployment processes with GitHub Actions, reducing deployment time.

Roles and Responsibilities:

- Led the backend development and system design of the mailing platform.
- Implemented folder and file management functionalities, allowing users to organize emails and files efficiently.
- Ensured all features had robust trash and restore capabilities.
- Developed core features such as notes, daily planners, event scheduling, and email encryption.
- Configured Linux servers and Nginx for reliable hosting and secure access.
- Automated deployment processes with GitHub Actions, streamlining the deployment pipeline.
- Conducted code reviews to maintain high code quality and best practices.
- Collaborated with frontend developers to ensure seamless integration and functionality across the platform.

Technologies: NodeJs, TypeScript, SQL, Sequelize, Twilio, Azure Blob Storage, Workbench, Github, Linux Server, Nginx.

Dosen (US Based Mentoring Application)

Dosen is a sophisticated mentoring application featuring 5 distinct user roles enabling organizations to create programs, manage users, and appoint program-specific administrators with granular access controls. It seamlessly matches mentors with mentees and facilitates real-time chat and video calls among users. Moreover, users can create articles with customizable visibility. Administrators access insights, member status, goal progress, assign levels and tasks to mentors/mentees, and receive email, SMS notifications.

Roles and Responsibilities:

- System design and architecture planning.
- Backend development and implementation.

- Database design and management.
- Oversight of development processes to ensure alignment with project goals.
- Conducting code reviews to maintain high code quality.

Technologies and Tools: NodeJs, TypeScript, Azure function app, CosmosDB, Mongoose, Azure communication services, Auth0, SMTP, twilio, Mongo Compass, Studio 3T, Github.

Hotel Booking System (Backend Development)

Developed a secure and scalable backend for a hotel booking system. The system allows users to book rooms based on categories and premium options (including breakfast, lunch, and dinner) depending on the type of room booked. Integrated secure payment processing using Razorpay and implemented security enhancements with `helmet` for rate limiting and protection..

Roles and Responsibilities:

- Developed and maintained backend APIs for room booking, user management, and payment processing.
- Integrated Razorpay for secure and seamless payment processing.
- Implemented room categories and premium features based on user selection (e.g., meals based on room type).
- Used `helmet` for security enhancements, including rate limiting and protection against common security vulnerabilities.
- Collaborated with the frontend team to ensure smooth integration of APIs and efficient data flow.

Technologies: : Node.js, TypeScript, Razorpay, Helmet, Express.js MongoDB.
